## Scheduling Integrator

The more time you have to troubleshoot, the better. Project success depends on your team's ability to plan ahead.

With Scheduling Integrator, you have the tools to start the ball rolling long before construction begins. Quick, realistic project schedules are only an estimate away when using the Integrator to connect Estimating to industry-standard scheduling software—like Primavera or Microsoft Project for Windows.

Why build a schedule from scratch when so much useful information is already at your fingertips, such as labor and equipment details, material items, productivity factors, and estimator notes. Scheduling Integrator makes the most of your work by gathering these items from Estimating, an application for Sage Timberline Office and Sage Master Builder, and automatically creating a planning base of tasks or activities for use in building a schedule. Simply open the project file in your scheduling software and you're well on your way. Scheduling Integrator is a tool to jump-start and simplify the scheduling process, and give your team more time to plan for success.

### BENEFITS

- Jumpstart project schedules using existing estimate details
- Spend less time re-keying data and more time refining your schedule
- Avoid cumbersome import/export processes by cleanly integrating with industry-leading scheduling software such as Primavera and Microsoft Project

Group	Phase	Description	Labor Productivity	Labor Quantity	Labor Price	Labor Amount	Material Price	Material Amount
1000.000		<b>GENERAL REQUIREMENTS</b>						
	1062.100	<b>Bond/Certif: Insurance</b>

## Features

- Produces a schedule specifically geared to Primavera—Primavera Project Planner (P6) and SureTrak Project Manager—or Microsoft Project, or a generic file for use in other scheduling software.
- Generates tasks/activities by group phase, phase, item, assembly, material class, subcontractor, location, job cost phase, CAD reference or Work Breakdown Structure (WBS) codes in the estimate.
- Lets you specify how work and duration units are measured (by hours, days, weeks or months) based on scheduling software options, and choose how days and weeks are defined.
- Calculates durations for entire task/activity.
- Tracks labor/equipment resources, as well as subcontractors and special material resources.
- Automatically transfers estimator notes into scheduling software.
- Update a schedule with estimate additions or revisions.
- Runs on:
  - A single workstation housing both Sage estimating and scheduling software.
  - Two workstations, one hosting Sage estimating and the other hosting the scheduling software.
  - A network.

Scheduling Integrator is part of the Sage Construction and Real Estate family of fully integrated software created to streamline work and connect the people you depend on to build your business.
