

What if you could

streamline your takeoff process by completing your measurements and calculations as you mark up your drawings, allowing you to generate faster, more accurate takeoffs?

The screenshot displays the On-Screen Takeoff software interface. On the left, a takeoff list is visible, listing various items and their quantities. The main area shows a drawing of a building layout with colored overlays representing different takeoff items. An inset drawing shows a detailed view of a wall section with dimensions and annotations.

Item	Quantity
Wall Type 2 - 6"	26 LF
Wall Type 1 - 3 5/8"	371 LF
Double Doors	1 EA
LH Doors	1 EA
RH Doors	1 EA
F1 - 12" D x 28" W	51 LF
4" Slab	2 CY
8" CMU	41 LF
SR Ceilings	1,425 SF
VCT 2,8	285 SF
CPT 25	135 SY
CT 1	135 SF
SR Ceilings	145 SF
hm lh door 7/3	3 EA
2x2 Ceiling	565 SF

On-Screen Takeoff® increases accuracy and efficiency, which in turn helps you to win more profitable bids.

Have you ever wondered if there was a way you could simplify your takeoff process? Wouldn't it be nice to draw takeoffs right on your screen and have calculations and measurements done for you?

On-Screen Takeoff can do all of this while at the same time greatly reducing the chance of errors. If increased accuracy and speed, greater profits, and lower risk are important to you, On-Screen Takeoff is the software for you.

ON-SCREEN
Takeoff®
Advanced Takeoff Software

INCREASE ACCURACY:

- View **color-coded drawings** to identify conditions and their quantities.
- Takeoff the typical area one time, and by design, extend the quantities to all the appropriate individual areas with the **typical areas feature**.
- Complete your takeoff and **make area assignments** or phase adjustments after you are done without re-taking off the project.
- Save multiple hours of exhausting plan review with the **overlay feature**. When comparing two versions of a drawing, deleted items are in red and added items are in blue.

Reduce errors while reducing risk

REDUCE RISK:

- Eliminate manually summarizing takeoff. Benefit from **conditions** itemized by area and **totaled automatically**, with filtering capabilities.
- Open details, sections, and elevation with the **secondary view**, and see a floor plan simultaneously.
- Use the layers feature when completing a takeoff of multiple divisions of work to **visibly turn conditions on or off the plan image** while concentrating on certain scopes of work.
- **Increase communication** efficiency by copying and pasting plans with takeoff, notes and annotations to submit as an RFI.

BID MORE IN LESS TIME:

- Eliminate an **entire manual takeoff process**. As you highlight marked images, precise quantities are automatically measured. "If it's colored, it's counted."
- **Instantly calculate** up to three different quantities per condition, chosen from multiple formulas.
- Streamline project setup by creating **typical takeoff conditions** called styles. Combine styles into sets to quickly drop-in multiple conditions to your bid.
- Create an **export** link directly with your **Microsoft Excel** templates through On-Screen Takeoff.

Every condition that you create in On-Screen Takeoff is color-coded
