Office Connector is an Excel Add-In that allows you to access your Timberline Office data quickly and easily. The Add-In places new menu items and toolbar buttons in Excel as well as new worksheet functions that you can use inside Excel formulas.

With Office Connector, you can **seamlessly** access your Timberline Office data from Excel. Office Connector automatically creates a connection to your database using Timberline Office's ODBC driver without the need for you to configure data sources or create queries.

Office Connector allows you to embed dynamic queries that retrieve data from your Timberline Office database into your Excel workbooks. Data can be refreshed at any time with the click of a button, or you can sever the link and create a static snapshot of the values that can be sent to other Excel users.

Create **concise** and **dynamic** links to data in any field on any record in the Timberline Office database using powerful Office Connector functions. With these functions, you can lookup field values from specific records, sum a given field in the database while applying criteria and much more!

Start developing entire spreadsheet solutions that work with your Timberline Office data today!

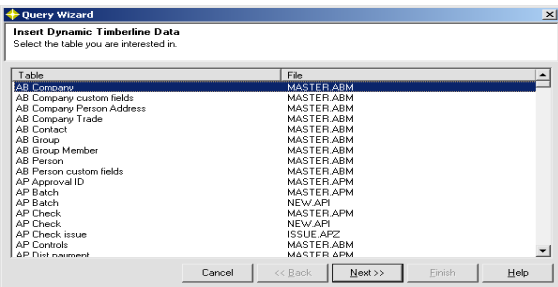

Office Connector Tools

Icon	Tool Name	Description
	Save As Values	Saves a copy of the current workbook without any Office Connector queries or worksheet functions included. The saved workbook can be used by any user of Excel without needing to have Office Connector or Timberline Office installed.
	Open Timberline Office Data Folder	Allows the selection of the Timberline Office data folder that will be associated with the current workbook.
	Refresh Timberline Office Data	Refreshes all Office Connector queries and worksheet functions by re-querying the Timberline Office data.
	Insert Query	Inserts a dynamic query into the worksheet where rows are automatically inserted or deleted based on the records returned by the query.
	Import Timberline Office Data	Imports a table of Timberline Office data into the worksheet.
	Lookup Field Value	Displays a wizard that results in the creation of an Office Connector TSLookup function in the current cell. A TSLookup function can retrieve a value from a single field on any record in the Timberline Office database.
	Find Record	Displays a wizard that results in the creation of an Office Connector TSFind function in the current cell. A TSFind function can retrieve a value from a single field on a record specified by search criteria.
	Count Records	Displays a wizard that results in the creation of an Office Connector TSCount function in the current cell. A TSCount function can count the number of records that meet specified criteria.
	Sum Fields	Displays a wizard that results in the creation of an Office Connector TSSum function in the current cell. A TSSum function can return the sum of a single field in a set of records that meet specified criteria.
	Display Help	Displays the Office Connector online help, which documents function syntax including examples.

Wizard Driven

Office Connector's wizards make it easy to accomplish the tasks that you want.

Easy Connectivity

Office Connector allows Excel to Connect with Timberline Office data and without the need for you to setup ODBC data sources or define queries!

System Requirements

Operating System: Microsoft Windows 2000, XP or 2003 | **Microsoft Excel:** Microsoft Excel 2000, 2002, XP or 2003 | **Timberline:** Timberline Office 8.x or 9.x | Timberline Office ODBC Driver | All other system requirements as defined by Timberline
