

Designed by professionals with over 20 years of mechanical estimating and computer programming experience, FastPIPE is an advanced Mechanical Estimating software system designed to make your estimating projects fast, consistent, and accurate. The first FastPIPE system was deployed in 1995 and it has continually evolved with new features and capabilities. Compatible with Microsoft Windows 7, Vista, or XP, FastPIPE is easy to implement, easy to learn, and easy to use.

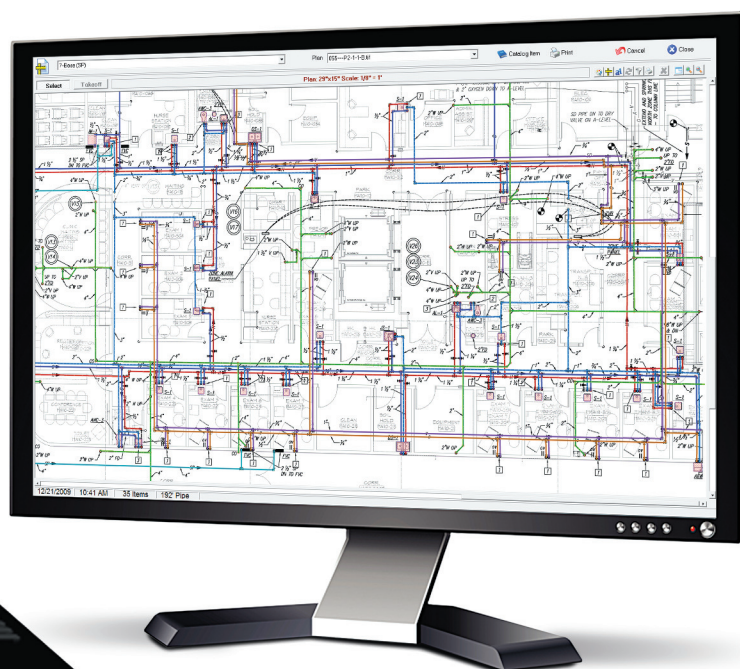

FastPIPE is ready-to-go estimating software designed to meet the needs of industrial and commercial plumbing and mechanical contractors. FastPIPE has the capability to build takeoffs of any kind of piping, calculate material costs and labor hours, generate reports, and export data to Microsoft Excel. Our Microsoft Excel reports can interface with FastDUCT to create a single Recap sheet for both pipe and duct.

FastPIPE software incorporates the award-winning On-Screen Digitizer, which allows users to perform takeoffs directly from digital plans on their computer screen, reducing time and costs of printing and manually marking paper copies. The On-Screen Digitizer is tightly integrated within the FastPIPE and FastDUCT estimating systems, providing an intuitive point-and-click interface for marking digital drawings.

FASTPIPE

*provides many
advantages over
other estimating
systems.*

Supports both single and dual monitor configurations.

Fast

Takeoffs are fast with FastPIPE. To takeoff an item, you simply select the size and appropriate Pipe, Valve, Fitting, Flange, Hanger, or Specialty item. Quantities can be entered with the mouse, keyboard, a digitizer, or by simply marking the item on digital plans, which you can import with the On-Screen digitizer. FastPIPE even has the "AutoConnect" feature, which automatically connects pipe from fitting to fitting, providing a scaled measurement of the pipe, including hangers and joints. Typical areas such as hotel rooms, apartments, and classrooms, can be copied and pasted to different locations, and even rotated if necessary.

Accurate

FastPIPE has the largest, most complete catalog with over 150,000 items. We've included data for every major manufacturer's piping, fittings, valves, flanges, and hangers (and we continually add new data based on our customer's needs). Our piping products include manufactures such as Tyler, Nibco, Gruvlok, Viega, Anvil International, Weldbend, Swagelok and many others. Our catalog provides up-to-date pricing and industry-standard MCAA and PHCC labor rates for each of the items in our catalog, allowing you to build estimates fast and accurately. Reports features allow you to adjust material pricing at the job level, and to address job conditions that may influence productivity. Our bid recap sheets allow you to modify labor rates, crew mix, job expenses, overhead and profit to consistently provide accurate results.

Affordable

FastPIPE is priced lower than other comparable systems in the market, but owning FastPIPE can also reduce costs in various ways. The ease of implementation and usage can reduce training costs and allows contractors of all sizes to utilize the software on a wider range within their organizations. Also, when digital plans are available, the On-Screen Digitizer can eliminate the time and reduce the costs of printing paper copies. Finally, providing faster more accurate estimates can increase your company's overall estimating efficiency.

Easy Implementation

With the help of our professional staff, our customers learn the FastPIPE estimating system very quickly. FastPIPE is shipped Ready-To-Go with a complete database, a large library of pipe specs and assemblies, and pre-loaded Bid recap sheets. We can assist in the setup of material discounts and labor factors to match your company's costs and productivity. We can even assist you with professional estimating advice to make the transition from your current estimating methods as smooth as possible.

Support and Training

Our annual maintenance program for FastPIPE includes periodic program updates, database enhancements, and catalog pricing to keep your system up to date. It also includes unlimited toll-free support, web-based technical support, and even unlimited online training. We also can assist with program installation on either a stand-alone computer or a local network.
