

Sage Mobile Projects

For Sage 300 Construction and Real Estate

Benefits

- Ensure solid documentation by capturing critical project data for daily field reports while on the job site.
- Improve project communication and coordination through mobile RFI creation and monitoring in the field.
- Get data quickly from the field and to the office with Sage 300 CRE to keep stakeholders in the loop and ensure timely action.
- Relieve office staff of redundant work tracking and entering field data.

Mobile devices and apps put productivity tools into the hands of your field staff. Yet, too often the mobile benefits gained on the job site stop there. Not with Sage Mobile Projects.

Streamlined communication between the field and office

Sage Mobile Projects is tightly integrated with Sage 300 Construction and Real Estate¹—so everyone in the field and your office is working off the same information. There's no delayed data syncing. No reentering of field data into accounting and other back-office systems.

Everything works through Sage Construction Central, a new, secure web hub that connects Sage Mobile Projects with Sage 300 Construction and Real Estate. Plus, Sage Construction Central is mobile-responsive, so you can access it using any device and operating system.

¹ Sage 300 Construction and Real Estate version 17.1 required.

Document the daily details

How effective are your daily reports? Are they helping you identify and rectify problems on the job site? Will they protect you in case of legal action? Sage Mobile Projects streamlines field reporting tasks, making it easier for your superintendents to thoroughly log activity and issues as they happen:

- Automatically capture current weather conditions.
- Attach photos, with descriptions, to specific observations as well as full field reports.
- Store field reports and photos in a central location for easy access and backup.
- Pull from a list of employees or subcontractors to log who is on the job that day or default a crew from the previous day.
- View a list of your company's equipment to quickly select what is currently onsite.

- Log and then send production units in place and percentage complete directly into Sage 300 Construction and Real Estate for job cost and labor productivity tracking.
- Document materials received, including time of receipt, supplier, purchase order, quantity, and unit of measure.
- Enter employee time for automatic transfer to the Sage 300 Construction and Real Estate payroll system.

With Sage Mobile Projects, you can create comprehensive daily field reports for effective project monitoring and documentation.

Clear up construction concerns

Sage Mobile Projects helps you log and send requests for information (RFIs) the moment you run across an issue. Whether it's project document inconsistencies, unforeseen site conditions, or other conflicts, you can get on top of concerns on the spot—and reduce costly construction rework later on:

- Easily create a new RFI with shortcuts, such as pulling in recipient name and email electronically from the Sage 300 Construction address book.
- Set a priority level and required response date for each RFI to assure your most urgent requests are answered quickly.
- Attach documents in question, photos, and other relevant items.
- Keep tabs on which RFIs have been answered and which need further follow-up or escalation.
- Store and track responses to each RFI for solid documentation of instructions given and decisions made on the project.
- Track cost and schedule impact by RFI.

Sage Mobile Projects helps you more efficiently manage RFIs to keep projects on schedule.

More to come

Mobile daily field reports and RFIs are just the beginning. Watch as Mobile Projects adds new capabilities to cover all your project management needs in the field.
